

# SCIENCE SCAVENGERS

Explore the world around you, and reinvent it.

How quickly can you find everything on the list?

Find something...

- with more than one part
- with an interesting texture
- with numbers on it
- you can use to make a reflection
- that looks heavier than you
- that has an interesting pattern
- that changes how you see

- that needs electricity to work
- that would be useful at night
- that could hold a liquid
- made of glass
- that couldn't be made of glass
- that makes our lives easier
- you wish you had invented

# INVESTIGATE, IMPROVE AND INVENT

Choose one object from the list :

---

**Investigate** your object. Write your findings in the cloud.

You could think about...

what it does

what it is made from

who uses it

why it works

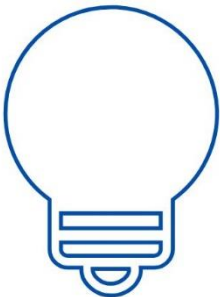

---

**Improve** on the design. What changes would you make to make this object work better?

What would you like it to do?

How would it work?

---

Time to **invent!**

Draw your invention and label it, or you could build it from recyclable materials. Show it to someone you know and see what they think.
